

Application fact sheet: Sulfuric acid & oleum

Inline sulfuric acid and oleum measurements with just one analyzer! SensoTech offers safe and accurate inline sulfuric acid and oleum measurements to improve production and quality. Our LiquiSonic[®] analyzers are capable of measuring the entire ran-

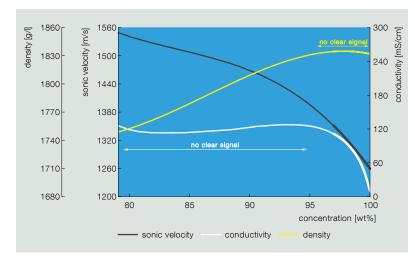

ge of sulfuric acid and oleum. SensoTech offers

you inline process solutions for all kinds of industries, like

- $\cdot\,$ sulfuric acid and oleum production
- $\cdot\,$ synthesis gas drying in the chemical and petro chemical industry
- · etching and pickling agents in the steel industry
- · ore processing in mining
- · raw material for sulfate fertilizer
- · basic chemical for various chemical products

Benchmark with other measuring methods

- $\cdot\,$ high accuracy of 0,05 wt% between 80 % and 100 % $\rm H_2SO_4$
- · conductivity and density show inflection points
- · standard devices do not allow field adjustment
- poor sensitivity

Benefits

- · increase of quality, production, cost savings, revenue
- continuous real-time monitoring of concentration and blending processes
- $\cdot\,$ high accuracy, plug&play, maintenance-free, no moving parts
- · automatic and high-precision temperature compensation
- $\cdot\,$ corrosion-resistant materials like Hastelloy C-2000 or Tantalum
- up to four sensors connected to one LiquiSonic[®] 30 controller

In liquids, we set the measure.

Concentration Temperature 10 - 95 °C H₂SO₄ 60 - 100 wt% H₂SO, 10 - 40 wt% 20 - 60 °C 0 - 30 wt% 20 - 60 °C oleum H_2SO_4 /oleum 80 - 110 wt% 20 - 60 °C < 0.05 wt% H₂SO₄ or oleum accuracy

Sonic Velocity

resolution: -0.01 m/s reproducibility: ±0.02 m/s accuracy: ±0.05 m/s Temperature resolution: 1 mK reproducibility: ±0.02 K accuracy: ±0.05 K

Application highlights

- · DCDA or WSA process
- · synthesis and chlorine gas drying
- · fertilizer production
- · copper mining

LiquiSonic[®] analyzer
